

Surveillance Camera Hosting

WHAT WILL YOU FIND IN OUR CLOUD SURVEILLANCE?

Unlimited Cameras. Unlimited Storage.

Surveillance Hosting as a Service, is a state-of-the-art security camera system, operating on a virtual cloud environment located in data centers with top level security and highly scalable resources. Access your surveillance system from anywhere, at anytime and on most any PC or Smart Phone. No DVR equipment to purchase, install or maintain.

Who needs Surveillance Hosting? (We think you do.)

- * Clients who do not want to invest financial resources in local DVR equipment.
- * Clients who have a large number of remote users such as: childcare facilities, city government and construction sites.
- * Clients who do not want to purchase and maintain local video storage drives and other hardware.
- * Clients who do not have the space for a local surveillance system.
- * Clients who need to monitor multiple locations, without having to access each one separately.
- * Clients who want security video stored off-site and easily accessible from one login.

Benefits of our Surveillance Hosting? (This list is only limited by your imagination.)

- * No local DVR or NVR equipment is required. "How much would it cost you to purchase, maintain, and keep it updated?"
- * No fears of data loss from drive failures or theft.
- * No geographical limitation for cameras or clients.
- * Compatible with 60+ camera manufacturers and 900+ cameras including megapixel, PTZ and video encoders for legacy cameras.
- * Scalable to unlimited cameras, video storage and user accounts.
- * Web access 24/7/365, from anywhere.
- * Multi-location monitoring from a single login.
- * Status and event notifications.
- * Monitor live, playback and export security video.
- * Client facility/E-map showing all your cameras.
- * Server or client side motion detection.
- * Managed cloud surveillance servers with 99.9% uptime guarantee.
- * Unlimited helpdesk support and software is always up-to-date.
- * Software is approved for State/Government systems.
- * Reseller accounts available.

Our cloud surveillance hosting allows companies and government organizations to scale their security infrastructure as their needs change. You simply connect your security cameras to the internet and the live feeds are sent to our online security servers where the video is automatically analyzed and recorded. Your hosted surveillance system can manage cameras from existing surveillance installations, legacy security cameras (BNC video) and more than 900 network IP cameras including megapixel & PTZ cameras. You can now deploy new security cameras in a fraction of the time as it took with traditional surveillance. Our online surveillance platform was designed to make the functions for the end user simple to operate, with easily accessible features and we take care of all the difficult stuff. Let us help meet your ever-growing security demands by empowering you with a surveillance platform that is always up-to-date, you don't have to repair, and will grow with you.

"What do I do now?"
