

Rapid Deployment Camera Mount

Compatible with all RDK camera kits
(These images shown with the PTZ camera kit)

There are several ways you can use the camera mount. It can be Vertical, Horizontal or Roof mounted. Quickly deploy your camera to a building, tree, telephone pole, inside vehicle or simply placed on the ground.

The camera is secured to a telescoping pole that can easily be adjusted to the height you require. This is "no tools setup", just a couple of quick release pins to setup and breakdown. If requested, we can provide different length poles for adjustable height. Mounting holes in the base plate, allow you mount the camera with screws or other anchors, including ratchet straps. In addition to this rapid deployment mount, your rapid deployment camera will also fit our 6', 9' & 15' tripods.
